

PATENT  
P56909**IN THE CLAIMS**

Please amend claims 1, 4, 11 and 15 and newly add claim 26 by this amendment as follows:

1           1. (Currently Amended) A plasma display panel, comprising:  
2           a front substrate and a rear substrate opposing one another with a predetermined gap  
3           therebetween;  
4           a plurality of display electrodes formed on the front substrate;  
5           a dielectric layer formed on the front substrate covering the display electrodes;  
6           a plurality of first barrier ribs and a plurality of second barrier ribs formed on the rear  
7           substrate essentially perpendicular to each other forming an array of discharge cells, each  
8           discharge cell being completely surrounded by said first and said second barrier ribs;  
9           a plurality of phosphor layers formed in the discharge cells; and  
10          a plurality of electrically conductive address electrodes being formed orthogonal to  
11          the display electrodes in the discharge cells, said address electrodes being parallel to said  
12          first barrier ribs, wherein the discharge cells defined by the first barrier ribs and the second  
13          barrier ribs are rectangular and staggered to discharge cells on an opposite side of a first  
14          barrier rib ;and  
15          ~~fixing grooves formed in edges of the rear substrate at areas corresponding to terminal~~  
16          ~~areas of each of the address electrodes, the fixing grooves securing the terminal ends of the~~  
17          ~~address electrodes.~~

PATENT  
P56909

1           Claims 2 and 3 (Canceled)

1           4. (Currently Amended) The plasma display panel of claim 1, further comprising a  
2           plurality of fixing grooves formed in edges of the rear substrate at areas corresponding to  
3           terminal areas of each of the address electrodes, the fixing grooves securing the terminal  
4           ends of the address electrodes, wherein the terminal areas of the address electrodes  
5           positioned in the fixing grooves are further secured by an adhesive member.

1           5. (Original) The plasma display panel of claim 1, wherein a height t2 of the second  
2           barrier ribs is less than a height t1 of the first barrier ribs.

1           Claim 6 (Canceled)

1           7. (Previously Presented) The plasma display panel of claim 1, wherein the  
2           conductive address electrodes are circular in cross section.

1           8. (Previously Presented) The plasma display panel of claim 1, wherein the  
2           conductive address electrodes are polygonal in cross section.

1           9. (Original) The plasma display panel of claim 1, wherein the discharge cells defined  
2           by the first barrier ribs and the second barrier ribs have a polygonal shape when viewed from

PATENT  
P56909

a direction of the front substrate.

10. (Original) The plasma display panel of claim 1, wherein the discharge cells defined by the first barrier ribs and the second barrier ribs, have a circular shape when viewed from a direction of the front substrate.

11. (Currently Amended) The plasma display panel of claim 1, wherein the discharge cells ~~defined by the first barrier ribs and the second barrier ribs, are rectangular and staggered to discharge cells on an opposite side of a first barrier rib~~ on opposite sides of the first barrier rib are staggered by a distance that is less than a length of a side of a discharge cell that borders the first barrier rib.

12. (Previously Presented) A plasma display panel, comprising:  
a front substrate and a rear substrate opposing one another with a predetermined gap therebetween;  
a plurality of display electrodes formed on the front substrate;  
a dielectric layer formed on the front substrate covering the display electrodes;  
a plurality of barrier ribs formed on the rear substrate and comprising a plurality of first barrier rib members formed in a direction orthogonal to the display electrodes, and a plurality of second barrier rib members formed in a direction parallel to the display electrodes, the first barrier rib members intersecting the second barrier rib members, the

PATENT  
P56909

10 plurality of barrier ribs forming an array of discharge cells, each discharge cell being  
11 bounded by a pair of first barrier rib members and a pair of second barrier rib members;  
12 a phosphor layer being formed in respective discharge cells; and  
13 address electrodes comprising conductive wires and coated with a dielectric material,  
14 the address electrodes being mounted on the second barrier rib members, the address  
15 electrodes being orthogonal to the display electrodes, wherein grooves are formed in distal  
16 ends of the second barrier rib members into which the address electrodes are inserted.

1 Claim 13 (Canceled)

1 14. (Original) The plasma display panel of claim 12, wherein a height  $t_2$  of the  
2 second barrier rib members are less than a height  $t_1$  of the first barrier rib members.

1 15. (Currently Amended) A plasma display panel comprising:  
2 a front substrate and a rear substrate opposing one another with a predetermined gap  
3 therebetween;  
4 a plurality of display electrodes formed on the front substrate;  
5 a dielectric layer formed on the front substrate covering the display electrodes;  
6 a plurality of barrier ribs formed on the rear substrate and comprising a plurality of  
7 first barrier rib members formed in a direction orthogonal to the display electrodes, and a  
8 plurality of second barrier rib members formed in a direction parallel to the display

PATENT  
P56909

9 electrodes, the first barrier rib members intersecting the second barrier rib members, the  
10 plurality of barrier ribs forming an array of discharge cells, each discharge cell being  
11 bounded by a pair of first barrier rib members and a pair of second barrier rib members;

12 a phosphor layer being formed in respective discharge cells;

13 address electrodes comprising conductive wires and coated with a dielectric material,  
14 the address electrodes being mounted on the second barrier rib members, the address  
15 electrodes being orthogonal to the display electrodes; and

16 fixing grooves formed in edges of the rear substrate at areas corresponding to terminal  
17 areas of each of the address electrodes, the fixing grooves securing the terminal areas of the  
18 address electrodes, wherein grooves are formed in distal ends of the second barrier rib  
19 members into which the address electrodes are inserted.

1 16. (Original) The plasma display panel of claim 15, wherein the terminal areas of  
2 the address electrodes positioned in the fixing grooves are further secured by an adhesive  
3 member.

1 17. (Previously Presented) The plasma display panel of claim 12, wherein a phosphor  
2 layer surrounds an outer circumference of the dielectric material that, in turn, surrounds the  
3 address electrodes.

1 18. (Original) The plasma display panel of claim 12, wherein the conductive wires

PATENT  
P56909

1 forming the address electrodes are circular in cross section.

1 19. (Original) The plasma display panel of claim 12, wherein the conductive wires  
2 forming the address electrodes are polygonal in cross section.

1 20. (Original) The plasma display panel of claim 1, wherein the address electrodes  
2 are realized through electrically conductive wires.

1 21. (Previously Presented) The plasma display panel of claim 1, each of the plurality  
2 of address electrodes being completely surrounded by the dielectric material and the  
3 dielectric material being completely surrounded by the phosphor layer.

1 22. (Previously Presented) The plasma display panel of claim 1, each of the plurality  
2 of address electrodes being mounted on the second barrier ribs.

1 Claim 23 (Canceled)

1 24. (Previously Presented) The plasma display panel of claim 12, each of the address  
2 electrodes running orthogonal to the second barrier rib members.

1 25. (Previously Presented) The plasma display panel of claim 1, the address

PATENT  
P56909

2 electrodes being coated with a dielectric material, wherein a phosphor layer is further coated  
3 on an outer circumference of the dielectric material coating the address electrodes.

1 26. (New) The plasma display panel of claim 1, wherein grooves are formed in distal  
2 ends of the second barrier rib members into which the address electrodes are inserted.
